Criteria for Data Analysis

In this assignment, students are asked to present the result of their data analysis. They are expected to give information on the type of analysis they carried out and present
a) quantitative data in chart, table or diagram format, and
b) (a sample of) qualitative data that is representative of their findings, in quotes.

Please note that this assignment is out of 15 points.

1. The paper clearly states the names/types of analysis methods used (E.g. Quan: descriptive statistics, frequencies, means, averages, etc.; Qual: thematic analysis, content analysis, tallying of responses, etc.)
2. The paper contains sufficient data to answer the research question(s).
3. All tables/charts/diagrams have captions and are formatted according to APA style.
4. Presentation of all figures (numbers, decimals, percentages) comply with APA style.
5. All tables/charts/diagrams OR verbal data/quotations are followed by a short description, and how they relate to the research question.
